RE: Zimek's Rapid Decontamination Systems

Dear Mr. Grosman:

As Director of Security/Facilities of the Central Florida Regional Transportation Authority dba LYNX, I am delighted to report that LYNX is a loyal and satisfied user of Zimek's rapid decontamination systems to help protect our bus patrons and employees from harmful bacteria, viruses, and mold.

Given all the information regarding airborne and surface-borne infectious pathogens, and with Central Florida having so many visitors from around the world, Lynx purchased three of Zimek's rapid decontamination systems to be proactive against impending pandemic threats in 2009. Lynx has continuously deployed Zimek's rapid decontamination systems for the past three years as part of our comprehensive decontamination protocol for our buses, passenger terminals, and offices.

During the past three years, over 87 million Lynx patrons have ridden buses treated by Zimek's rapid decontamination technology. Zimek's patented automatic ultra low-volume Micro-Mist disinfectant applications are administered regularly by Lynx's environmental services technicians to disinfect hard non-porous surfaces as an adjunct to manual cleaning and disinfecting. The use of Zimek's technology and products has become an indispensable part of our mission to help reduce infectious environmental contaminants from harming our patrons and employees.

On behalf of Lynx, thank you for providing us with this state of the art rapid decontamination technology to help prevent the spread of infectious diseases.

Sincerely,

William E. Zielonka
