MEDIA STATEMENT ON BIOTERROR, H1N1 REPORT

**ZIMEK TECHNOLOGIES CEO REACTS TO REPORT
ON NATION'S POOR RESPONSE TO H1N1 OUTBREAK**
Says Rapid Decontamination Technology is Key to Effectively Combating Threat

“Today’s report by the Commission on the Prevention of Weapons of Mass Destruction Proliferation and Terrorism on the nation’s poor response to the H1N1 outbreak should serve as a wakeup call. Our country faces daily reminders of the continued threats of H1N1 and biological warfare.

“Our country’s strategic defense against H1N1 must immediately diversify to include more aggressive prevention, specifically in the area of decontamination against deadly viruses and bacteria like H1N1.

“As the report indicates, vaccinations, while vital to overall prevention and safety, face obstacles that can prevent their widespread and immediate use, as history now shows us. It is clear our country needs to look at all tools available to add to our arsenal to prevent deadly diseases.

“Infections can be reduced through prevention by decontaminating rooms and vehicles. This will reduce the enormous burden suffered by the U.S. healthcare system in treating the victims of infectious bacteria and viruses. Rapid decontamination technology must play a greater role in the nation’s efforts to combat and prevent deadly viral and bacterial infections, giving us a new, forceful and efficient weapon in the war against infectious diseases.”

Kurt Grosman is the CEO of Zimek Technologies based in Tampa, Florida. Zimek Technologies, LLC is America’s foremost expert and leader in the area of rapid decontamination processes to kill deadly viruses and bacteria.
